

CSC 450, Lab Meeting #1 Rubric

Lab meetings are forums where researchers present and discuss their work, gaining feedback on how to improve their work and overcome any barriers that they currently face.

For the audience, the purpose of the lab meeting is to learn about ongoing research projects, and to stay up-to-date with questions being asked and methods and tools that are being developed; for the presenters, the lab meeting is a chance to make sure that their projects are on track, that the research problem has maximum impact, and that the methodology is sound. A presenter should use the opportunity to provide background about the research project, and ask questions so that their project will be improved. For example, a presenter might ask, *what tools are available to develop agent-based models (which can be used to build simulations)?* For these reasons, lab meetings should be relatively informal and should involve lots of discussion.

Your first lab meeting presentation will consist of three components:

1. Presentation of a *research* article related to your project that includes (1) relevant background; (2), a description of at least 1 figure/table from the paper describing a main result and the corresponding methods; (3) conclusions including any weaknesses or limitations of the paper.
2. A description of your research project that includes (1) the main objective and/or specific questions you plan to answer; and (2) the methodology you will use.
3. Questions for the audience related to your project

Presenters must submit their Lab Meeting presentations through Blackboard prior to the beginning of class. Lab meeting presentations will be evaluated using the rubric on the following page.

In addition, after your presentation we will continue to discuss our research projects on Piazza. ***Before your presentation, the presenter must post a "question" stating their name and their project, and then ask for questions and comments. Following each day of "lab meetings", non-presenters must post a question or comment on at least one presentation prior to the next class. Presenters will then have one week to respond to at least 3 questions.***

	Component	Points	Poor (D-F range)	Average (C range)	Excellent (A range)
Research Article	Title Page	-	-	-	Contains screenshot of article title, your name, date of presentation, and a URL of the article
	Background (1 slide)	10	Slide and/or explanations are missing.	Not all background is explained or the explanation or article objective are not clear.	Background relevant for understanding the project, such as terminology, is clearly explained. The objective of the paper is clearly stated.
	Results (1-2 slides)	30	Section is missing or figure/table or methods cannot be understood.	The figure/table or methods are not clearly explained.	At least one figure or table from the article is presented (use a screenshot) and clearly described. The explanation includes the relevant methods leading to the results that are presented.
	Conclusions (1 slide)	20	Section is missing or description cannot be understood.	Conclusions or weaknesses or limitations are not explained clearly.	The major conclusions of the article are clearly stated, including any weaknesses or limitations.
Research Project	Title Page	-	-	-	A tentative title describing your research project or topic
	Background (1 slide)	10	Background is not provided.	Not all background is explained or explanation is not clear.	Background related to your project is provided
	Proposed Project (1 slide)	15	No project description or (possible) methods are given.	Either the research objective, question, or topic, or methods are described but not explained clearly.	The proposed research objective, question, or topic is clearly described, as well as (possible) methods that will be used.
	Questions (1 slide)	15	No questions are asked about possible research questions or contributions, or relevant methodology.	Only 2 questions are asked about possible research questions or contributions, and relevant methodology.	At least 3 relevant questions are stated regarding possible research questions, and relevant methodology.
