

Research articles vs. Review articles

- A *research* article describes an investigation that is around answering a question, testing a hypothesis, or fulfilling an objective
- The researcher accomplishes this by designing a study, collecting and analyzing data, and drawing conclusions using an appropriate and reproducible methodology
- The method is detailed, and involves more than just searching and summarizing the literature
- A *review* article is an article that summarizes what others have done in a way that often organizes findings according to specific methods or themes
- When exploring research topics, review articles can be great places to start, but your research project in this class must fit the format of a research article
